

WORKFORCE OBSERVATIONS FOR WESTERN WISCONSIN COUNTIES

JUNE 2003

La Crosse Metro Rate Down, State Unchanged, National Rate Increases Slightly

May Local Labor Scene

The seasonally adjusted unemployment rate for the **La Crosse Metropolitan Area** declined 0.2 percentage points, resting at 3.9 percent in May. The 3.9 percent figure is 0.3 percentage points lower than the 4.2 percent recorded for May 2002. The statewide seasonally adjusted unemployment rate was unchanged from April at 5.4 percent, and up a tick from the 5.3 percent recorded statewide in May 2002.

La Crosse consistently has lower unemployment rates than the equivalent statewide rates and now that the slow but steady pull out of the economic doldrums has begun, the La Crosse economy is healing faster than the state as a whole. One of the principle reasons for the consistently lower La Crosse rates and the faster recovery in the area is the diverse nature of the La Crosse Economy.

As in the case of many economic slowdowns, the manufacturing industry has been the hardest hit in terms of layoffs and closures.

Statewide the percentage of workers currently employed in the

manufacturing industry is 18.4 percent, in the La Crosse area the percentage is 13 percent, making the state as a whole more dependant on manufacturing than the La Crosse metro area. Slightly more than 20 percent of employment in the seven 'non-metropolitan' Western Wisconsin counties is found in the manufacturing industry. The unadjusted unemployment rate for the seven 'non-metropolitan' Western Wisconsin was 4.7 percent in May 2003. The unadjusted rate in May for the La Crosse MSA was 3.5 percent.

All eight Western Counties experienced declining unadjusted unemployment rates in May, joining the 71 of Wisconsin's 72 counties that had lower unemployment rates in May than they experienced in April. The City of La Crosse was one of the 23 of the state's 28 largest cities experiencing decreases in unadjusted unemployment rates over the month. The City of La Crosse rate declines 0.5 percentage points during the month.

National Notes

Manufacturing experienced a slight increase in the Midwest in June, according to figures released by the National Association of Purchasing Management—Chicago Bureau. The Association's index edged up to 52.5 in June from 52.2 in

May. A reading below 50 indicates a contracting regional manufacturing sector, while a reading above 50 signals expansion. The employment component of the index, soft in recent months, edged up to 43.8 from 43.6 in May.

Nationally, spending on construction projects dropped in

May by the largest amount in a year, a sign that the economy is still struggling to get back on track. The value of construction projects under way in May was a seasonally adjusted annual rate of \$869.8 billion, representing a 1.7 percent decline from April's level, the US Commerce Department reported. Although rainy weather in some parts of the country played a role in May's decline, it still marked the third month in a row that construction spending went down at the national level.
